BASIC TUTORIAL OF ADOBE AFTER EFFECTS

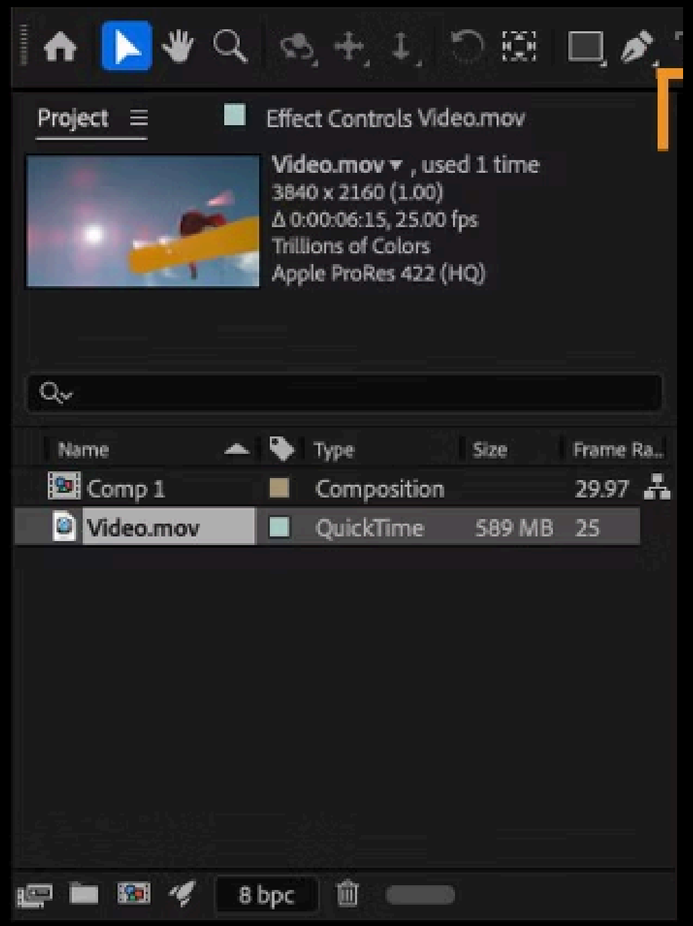
INTRODUCTION TO ADOBE AFTER EFFECTS

is a software used for motion graphics, visual effects, and animation. It is commonly used to create animated titles, video effects, and cinematic scenes in films and videos.

MAIN PARTS OF THE INTERFACE

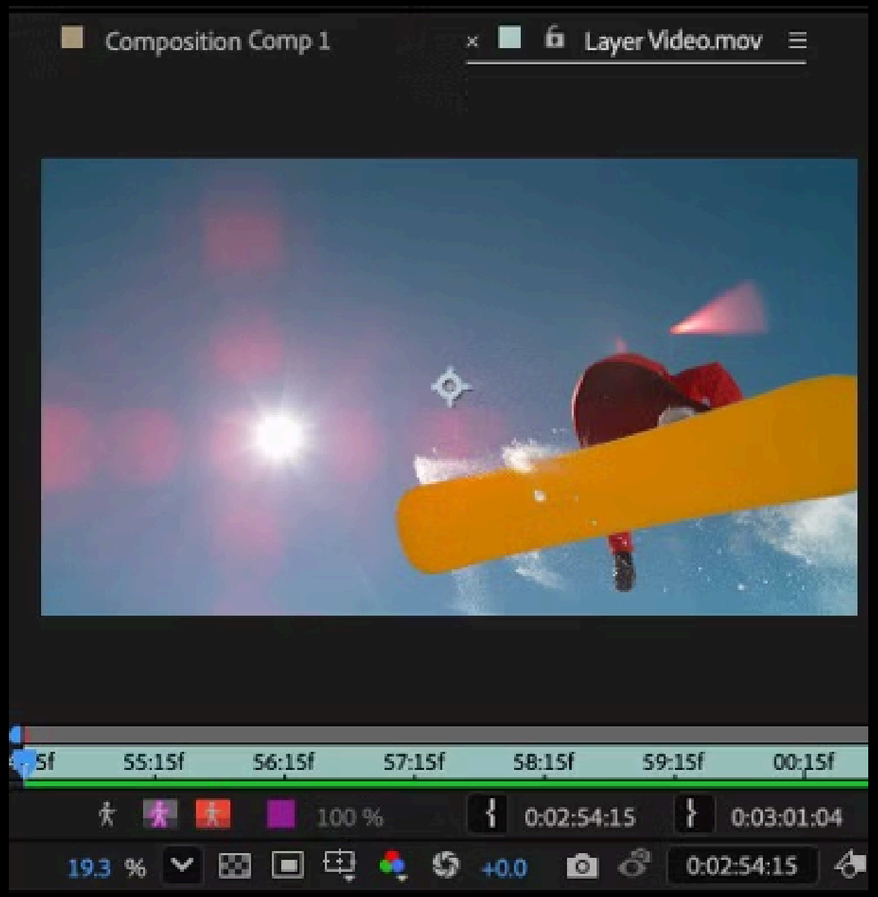
1. PROJECT PANEL

This is where all imported files such as videos, images, and audio are stored.

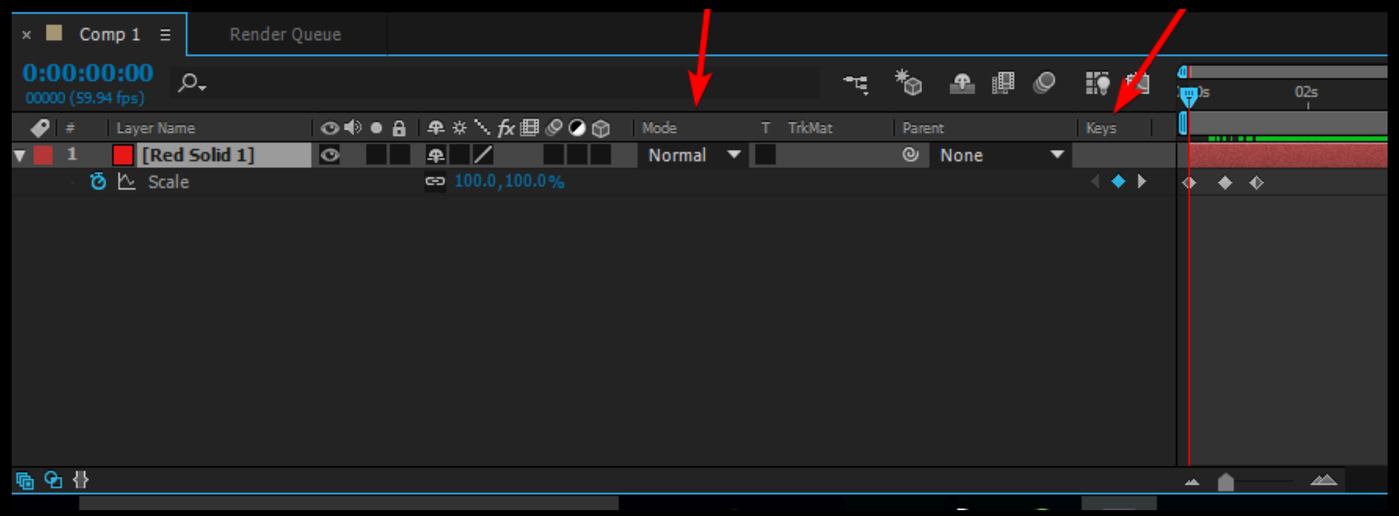


2. COMPOSITION PANEL

This is the main screen where you preview and edit your animation or video.

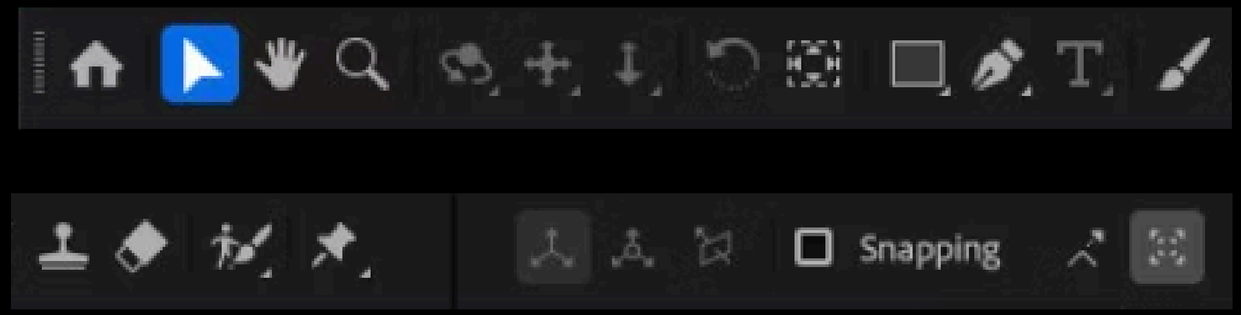


3. TIMELINE PANEL



This is where you arrange layers, control timing, and create animations.

4. TOOLS PANEL



Contains tools like Selection Tool, Text Tool, Shape Tool, and Zoom Tool used for editing.

BASIC STEPS IN USING AFTER EFFECTS

STEP 1: CREATE A NEW COMPOSITION

1. Click Composition
2. Select new Composition
3. Set the resolution, frame rate, and duration

STEP 2: IMPORT FILES

1. Click File
2. Select Import → File
3. Choose the video, image, or audio you want to use.

STEP 3: DRAG FILES TO TIMELINE

Drag the imported files from the Project Panel to the Timeline to start editing.

STEP 4: USE KEYFRAMES

Keyframes are used to create animations, such as:

- Moving objects
- Changing size (scale)
- Fade in or fade out effects

STEP 5: ADD EFFECTS

1. Go to the Effects & Presets Panel
2. Choose an effect
3. Drag it to the layer in the timeline.

STEP 6: EXPORT THE VIDEO

1. Click File → Export
2. Select Add to Adobe Media Encoder
3. Choose a format like MP4
4. Click Render.

EXAMPLES OF WHAT YOU CAN CREATE IN AFTER EFFECTS:

- Logo animation
- Animated titles
- Motion graphics
- Visual effects for films and videos
